

# The Right Decision Service

**The Right Decision Service** is a Once for Scotland platform for health and social care. It delivers evidence-based guidelines, pathways, shared decision aids and risk scoring tools directly into the hands of health and social care staff. The service is accessible online and via mobile apps. It is funded by Scottish Government and has been developed in partnership with health and social care staff across Scotland. Use **the Right Decision Service** to find, use and build decision support tools that support your local priorities for remobilisation and recovery, service transformation and realistic medicine.

## What practitioners say:

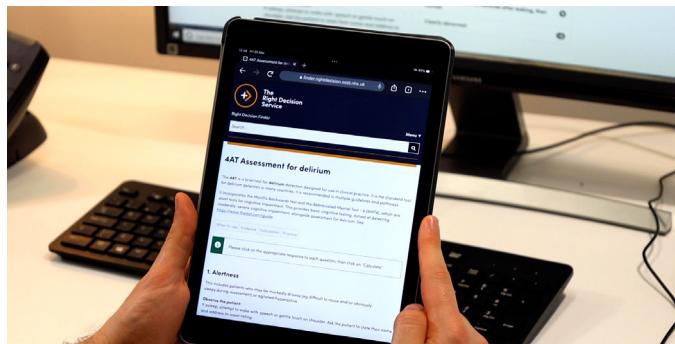

*“...this is the realisation of the quest for a single portal of information;” “A game changing clinical calculator tool”*

*“The [care at home] app was full of useful hints and tips regarding challenges we face but are maybe not prepared for.”*

*“The new shared decision tool starts the journey under realistic medicine.”*

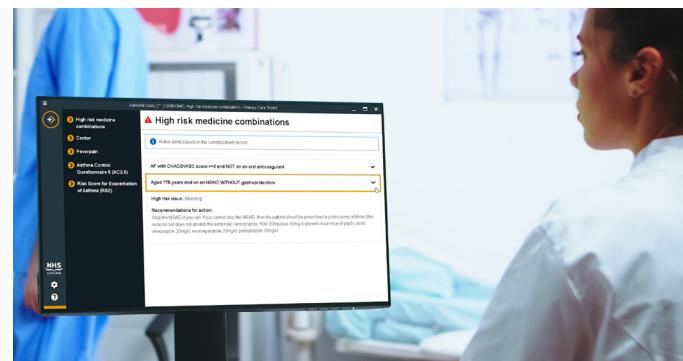

Enable simple, quick access to your **local guidelines, pathways, shared decision aids and patient information** through a Once for Scotland mega-app.

Build and use **UK CA marked risk stratification tools and calculators** - for example, to detect early deterioration.

## The decision support programme is now targeting five priorities:

1. Social care in the community – including care homes and care at home
2. Unscheduled and urgent care
3. Reducing waiting times
4. Improving routine care – including prescribing, and delivery of guidelines and pathways
5. Prevention and self-management

Embed **patient-specific prompts and alerts** in care record systems
